EDUCATION

University of Washington

Master of Science in Computer Science and Software Engineering

Dec. 2025

GPA: 3.85/4.0

Missouri University of Science and Technology (MS&T)

Bachelor of Science in Computer Science | Minor in Mathematics

Dec. 2022

GPA: 3.98/4.0

EXPERIENCE

Google

Seattle, WA

Incoming AI & Infrastructure Software Engineer

Mar. 2026

- Accepted a full-time Software Engineer role at Google in AI & Infrastructure (Persistent Disk)

Cloud Software Engineer Intern

Jun. 2025 - Sept. 2025

- Implemented 5 new metric extensions to enhance diagnostics and profiling for 640+ VM tests, driving higher customer satisfaction and streamlining troubleshooting for Google Compute Engine teams
- Leveraged the Google Cloud Platform, Python, and Linux to perform real-time metric collection on VMs, enabling immediate performance diagnostics and issue resolution
- Authored detailed design documentation outlining the project's background, technical strategies, and logic flow

Seagate Technology

Remote

Artificial Intelligence & Machine Learning Intern

May 2024 - Aug. 2024

- Engineered 8+ predictive models using innovative methods and algorithms to predict the Remaining Useful Life for machine consumables, projecting annual savings of over \$2,000,000 for the company
- Utilized SQL through DBeaver to perform complex queries and data extraction on Oracle and Trino databases, enabling efficient data exploration and supporting machine learning model development
- Received the Best Presenter Award among the global 2024 intern cohort for excellence in project presentation

Advanced Micro Devices (AMD)

Santa Clara, CA

Systems Software Engineer Intern

Jan. 2024 - May 2024

- Applied software engineering principles to create 4 Python automation scripts, resulting in a 70% reduction in setup time and improved workflow efficiency
- Collaborated with the team to determine user requirements and create features tailored to the workflow
- Created thorough documentation for the automation scripts and centralized all related resources to ensure ease of use, promote team-wide accessibility, and support continued development and collaboration

Deloitte

Arlington, VA

Technology Consultant Intern

Jun. 2022 - Jul. 2022

- Created an onboarding presentation highlighting team dynamics, communication strategies, and workflows
- Engaged with stakeholders to define project requirements and identify opportunities to adopt cloud technologies
- Facilitated cross-functional collaboration to streamline project timelines and deliver updates to senior leadership

Mottomo Sushi (Family-Owned Business)

Rolla, MO

Web Developer & Floor Manager

Aug. 2018 - Sept. 2023

- Designed a 3-page website for the restaurant using React.js, HTML, and CSS to showcase business information
- Successfully mitigated the issue of incorrect menus circulating online by consolidating information into one true source resulting in 0 customers reporting wrong menus
- Enhanced service quality by supervising and training 10+ employees in customer interaction and relations

PROJECTS

Articulation Points

Oct. 2023 – Dec. 2023

- Analyzed different parallelization strategies (MPI, Spark, MapReduce) to pinpoint weaknesses within a network, resulting in a 71-98% improvement in speed for identifying critical points

NBA Games Predictor

Nov. 2023 – Dec. 2023

- Built an accurate NBA games outcome predictor by leveraging feature engineering and machine learning models (SVC, Logistic Regression, Random Forest, Stacking, XGBoost), achieving a 70% accuracy rate

Chess AI

Mar. 2022 – May 2022

- Programmed a Python-based chess AI incorporating limited iterative deepening, min-max, alpha-beta pruning, and state recognition, enhancing the efficiency of finding winning states by 10% weekly

RESEARCH

Privacy-Preserving Genomic Diagnosis (Advisor: Dr. Wooyoung Kim)

Sept. 2024 - Dec. 2025

- Analyze scalability of TenSEAL's homomorphic encryption capabilities using mock data, measuring memory and encryption time
- Utilize the TenSEAL library to apply homomorphic encryption on TCGA genomic datasets, preserving data privacy
- Achieve 90% accuracy with logistic regression on encrypted genomic data using the CKKS encryption scheme

SKILLS

Certifications: Microsoft Azure Fundamentals (AZ-900)

Languages: Python, Linux, C++, SQL, Java

Dev Tools/Libraries: Google Cloud Platform, Git, Pandas, Sckit-Learn, Visual Studio Code, Spark
